

### USE OF ANIMA-STRATH® IN DIFFERENT CLINICAL SITUATIONS

#### **Anima-Strath® for small breed puppies (< 1.5 kg)**

These dogs get to the clinic within the 1<sup>st</sup> and 2<sup>nd</sup> month of life, very weak and usually immunodepressed. Administration of Anima-Strath® helps to reinforce their immune system.

In addition, these puppies have been weaned a few days ago. During the following week, their state of health needs to be monitored carefully, specially regarding blood sugar levels. Often, puppies present lack of appetite. Giving them Anima-Strath® for 2-3 days stimulates appetite and puppies start eating normally.

We have recommended pet shops to include a bottle of Anima-Strath® when selling a puppy. In such way, when the puppy gets to the clinic after 1 week at home, we can vaccinate it without immune system problems.

#### **Anima-Strath® for post-surgery recovery**

In our clinic, we also use Anima-Strath® immediately after surgeries to reduce the recovery period. In addition, the parameters from blood analysis improve in hepatic pathologies.

#### **Anima-Strath® for dermatological disorders**

In skin diseases, we have started adding Anima-Strath® to the treatment with Dermovital Omega 3-6-9, in order to potentiate the effect of the essential fatty acids. This protocol significantly contributes to the improvement of skin and fur.

#### **Anima-Strath® Thyme**

Some puppies start coughing right after getting out of the pet shop. It may be caused the proximity to the ground, which highly exposes them to dust or other irritating particles.

We use Anima-Strath® Thyme in dogs with chronic, allergic, dry or unproductive cough. These situations are difficult to heal without Anima-Strath® Thyme.

Yorkies are a breed prone to present coughs for 30 to 40 days, which cannot be eliminated with Bromhexine or Codeine-based medicines. Anima-Strath® Thyme helps to avoid the use of those medicines in such small dogs. It does not exert its action immediately, the improvement can be observed after 3-4 days and the cough can be totally eliminated.

As Anima-Strath® Thyme also helps in productive coughs, nasal discharge, or similar. It acts as expectorant and favors removal of thin or thick mucus.

Clients are increasingly showing interest for a more natural veterinarian medicine. When explaining Anima-Strath® origin and benefits, they feel happy and prone to give the product.
